

PCEMS Prehospital Blood Pilot Program

Effective 9/23/2026 at 0800 hrs, the Prehospital Blood Pilot Project is expanding its deployment capabilities.

In addition to the Critical Care Team, blood availability will now include Sunstar Field Supervisors, providing enhanced coverage across the county.

When identifying a patient who potentially meets the clinical criteria for a transfusion, please adhere to the following deployment reminders:

Call Early: Initiate the request as soon as the clinical need is identified to minimize any delays.

Use the Correct Channel: Communicate the request over the working fire TAC channel.

Request: Explicitly state, "Requesting a Blood Unit Response" over the radio.
